

GROCOR, LTD.®

THE GROW MORE PLANT AND TREE CARE SYSTEM!™

THE GROW MORE ROOT FEEDER!™

The Grow More Root Feeder!™ features a patented design that makes watering and fertilizing your landscape and garden easy. The ergonomic design, from the foam cushioned handles to the steel reinforced foot pegs, makes using this lawn and garden tool simple and easy. The root feeder can be used on vegetables, fruits, flowers, trees, shrubs, raised beds, and container gardens. It works in all types of soils and is IDEAL for slopes and hillsides. No erosion or run-off! The fourteen-inch heavy duty steel probe penetrates deep into the soil delivering over 5 gallons of water per minutes. That means 100% of the water and fertilizer is available to the roots. No guessing or wondering how much of the water is reaching the roots. You will save on the amount of fertilizer and water needed. Best of all, the results from using the Grow More Root Feeder!™ are remarkable.

US PATENT: 427,029

A Common Sense Approach to Plant Care!!

Get your new plantings off to a fast, healthy start. Feeding at the root zone promotes vigorous roots, which are the key to healthy, productive plants. The root feeder will help maintain your landscape investment and will stimulate plants that are stressed by disease, insects, and even drought conditions. Feed the plants and not the weeds!

The root feeder mixes the fertilizer for you at approximately one tablespoon per gallon of water. There is no mixing and no mess. You control the exact amount of water and product being injected using the fingertip 'On/Off' water control valve. The root feeder is self-cleaning. Simply allow the water to run for a second upon the removal from the ground and wipe with a cloth.
