

ATTENTION

We have made an improvement to the Grow More Root Feeder Probe. Rather than the steel probe having **5 water jets**, it now has **8 water jets**. This allows the water to saturate a 360 degree area of your root zone rather than just 180 degrees.

With this improvement, you can DISREGARD any instructions or videos which pertain to aligning the water jets with the little yellow arrow on top of the root feeder. Simply tighten the steel probe until snug. **IT MAKES NO DIFFERENCE WHERE THE JETS ARE POINTING.**

IMPORTANT– When using the G-10 Combination Feeder Bottle or the G-12 Liquid Feeder Bottle with the Grow More Root Feeder... when you shut off the water control off valve it is possible for your fertilizer to siphon out of the feeder bottle without the water running. To avoid this siphoning action you can simply turn the **selector knob** to the “OFF” position.

IMPORTANT – Make sure you use the **Flex Hose Accessory** when the feeder bottle is fastened to the Root Feeder.

FOLLOW ALL OTHER INSTRUCTIONS INCLUDED WITH YOUR ROOTFEEDER AND G-10 OR G-12 FEEDER BOTTLES.
